Summary

Staff engineer with 10 years of backend experience across consumer lending, payments and retail systems. Builds the platform layer for multi-tenant fintech products: workflow orchestration, configuration stores, API gateways and shared service libraries in Java, Spring Boot and Go.

Skills

Languages	Java, Go, Python, SQL
Backend	Spring Boot, Spring Cloud Gateway, JPA/Hibernate, REST, gRPC, Flask
Data	PostgreSQL, Redis, MongoDB, DynamoDB, Oracle SQL
Messaging	Apache Kafka, ActiveMQ, AWS SQS
Cloud & Infra	Azure, AWS (EC2, S3, SQS, SageMaker), GCP, Docker, Kubernetes
Build & Observability	Maven, Gradle, Grafana Stack, ELK Stack
Architecture	Microservices, event-driven workflow orchestration, low-code configuration platforms, BFF layers, API gateway, multi-tenant platform design

Experience

SwiffyLabs

STAFF ENGINEER

Bengaluru, India

July 2026 – Present

- Own the loan origination system (LOS) stack for a lending platform serving 6 lender clients, leading a cross-functional team of 10 frontend and backend engineers
- Build Nimbus, a graph-based workflow engine developed in house as an alternative to Temporal, sustaining 100K+ LOS journeys per day as the state layer for every lender journey on the platform
- Build a low-code orchestration engine for assisted journeys, in which lender staff originate loans on behalf of customers, generating forms and flows from configuration
- Model integrations and persistence for those journeys as configuration rather than code, letting the delivery team onboard new lender requirements without a release
- Build Keystone, a schema-driven configuration store persisting strongly typed JSON in dynamically provisioned PostgreSQL tables behind HTTP endpoints, used by all LOS services and by the React form-driven frontend
- Define service boundaries, data models and review standards for the LOS platform, from lender onboarding through to customer disbursal journeys

Technologies: Java, Spring Boot, PostgreSQL, Redis, Kafka, Docker, Kubernetes, Azure, Grafana Stack

Jio Platforms

STAFF ENGINEER

Bengaluru, India

Feb 2024 – June 2026

- Led backend architecture for Jio Digital Wallet, a cross-platform consumer wallet positioned as an alternative to Apple Wallet
- Led the loan origination system build for the group banking products, and designed the configuration-driven workflow manager serving as the BFF layer for every LOS user journey
- Built UPI payment platform integrations and implemented consent capture, retention and erasure flows to bring the wallet under India DPDP requirements
- Designed the end-to-end encryption scheme for wallet payloads, keeping card and identity data opaque to backend services

- Authored shared platform libraries for caching, message brokers, HTTP clients and structured logging, adopted across backend teams
- Owned the Spring Cloud Gateway handling all ingress traffic, covering authentication, rate limiting and distributed request tracing

Technologies: Java, Spring Boot, Spring Cloud Gateway, PostgreSQL, Kafka, Redis, Azure, Kubernetes

ZestMoney (CamdenTown Technologies)

Bengaluru, India

STAFF ENGINEER

Aug 2022 – Feb 2024

- Led a team of engineers building and operating consumer lending services, translating requirements from product and senior management into delivered systems
- Designed and built personal loan application and processing services in Go, covering application intake, underwriting handoff and disbursal
- Integrated BNPL and EMI checkout with online merchants including Flipkart and Amazon
- Built bank integrations with HDFC and ICICI offering EMI to existing-to-bank customers at merchant checkout
- Built and maintained ZestLife Channel, the orchestration layer proxying traffic between consumer apps and internal lending services

Technologies: Go, Java, PostgreSQL, Kafka, AWS, Docker

Lowe's India

Bengaluru, India

SENIOR SOFTWARE ENGINEER

Dec 2021 – Aug 2022

- Developed Tachyon, an in-house self-checkout system built as a native Go application on Linux and deployed across retail store floors
- Extended the self-checkout application into a platform supporting multiple till types across store formats
- Built transaction dashboards and alerting across the self-checkout fleet

Technologies: Go, Linux, PostgreSQL, Docker, ELK Stack

Publicis Sapient (contract at Lowe's India)

Bengaluru, India

SOFTWARE DEVELOPMENT ENGINEER

Nov 2020 – Dec 2021

- Enabled cash processing capabilities across retail stores as part of the self-checkout programme
- Developed and maintained point-of-sale capabilities for in-store self-checkout systems

Technologies: Go, Java, Linux

HERE Solutions India

Mumbai, India

SENIOR SOFTWARE ENGINEER

June 2018 – Oct 2020

- Built community platform services in Java and Spring Boot for ingesting and managing map data, publishing real-time map updates
- Developed Go services validating and repairing map data before ingestion to protect map quality
- Automated verification of map objects from satellite imagery using ML models and image processing hosted on AWS SageMaker
- Built APIs powering map editing through HERE Map Creator, and automated deployment pipelines into AWS infrastructure

Technologies: Java, Spring Boot, Go, AWS (SageMaker, EC2, S3), PostgreSQL

Zycus Infotech

Mumbai, India

SOFTWARE ENGINEER

July 2016 – May 2018

- Built the central reporting system for the Zycus procurement product suite, generating tabular and summary reports with filtering, sequencing and ordering from runtime-constructed queries
- Designed a data warehousing layer consolidating product data for customer analytics, flattening product metadata and its dependencies into a three-level hierarchy

Technologies: Java, Oracle SQL, JMS, Aspose

Education

C.V. Raman College of Engineering

Bhubaneswar, India
